

APPENDIX

Two documents, closely related to the subject of the meeting "Towards a second green revolution", are reported in the Appendix.

The first one is the result of the discussions held at the Rome Forum by a group of economists and scientists on the economic and technical problem raised by an eventual change in the agricultural practices in tropical areas and mainly in Africa.

The second is the report of the African Academy of Sciences and represents the answer to the request of a Village pilot project presented at the conclusions of the Meeting (cf. page 491).
